Name:	Login
Summary:	Customer with membership uses username and password to login
Version:	1.0
Preconditions:	Customer must have a membership and a valid username and password for that membership
Triggers:	Customer initiates membership login by clicking "Member Login"
Main Success Scenario:	Customer enters Membership username and password and it is passed to verify login case.
Alternative Success Scenarios:	Customer enters incorrect information and invalid login error is called.
Post conditions:	Customer logs submits login and the password use case will be called to verify the password
Business Rules:	Customers must be logged in as members in order to rent media. They have access to search media but cannot access rent media without valid login.
Notes:	Customers can freely browse the app without using login but will not have the ability to rent videos without first logging in and verifying membership
